## Louvered canopy

The Altera, a modern and sleek slatted roof reminiscent of our Cubola. In appearance almost identical, the difference is in the sun protection system. The Altera is equipped with aluminium slats that can be rotated 125°. Thanks to the clever construction, which consists exclusively of aluminium profiles, the Altera is very robust, easy to assemble and one of our most durable awnings to date.

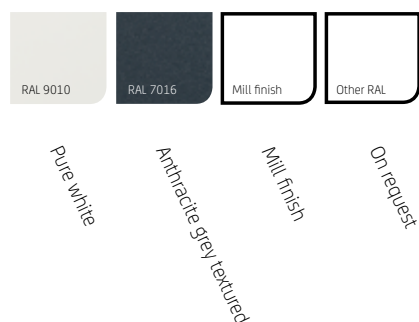

It is possible to place the Altera both freestanding and wall-mounted. Linking is also possible. This way you always have control over where and when you want to create shadow or light. If you are not completely convinced yet, the sealing rubbers in the slats and the excellent drainage make the Altera waterproof. The ultimate flexible outdoor space to fully enjoy the outdoors.

Standard with high quality electrical control, available in RAL 9010 (pure white), RAL 7016 textured (anthracite grey) or mill finish. However, every RAL-colour is possible on request. Ask your dealer about the possibilities.

### Characteristics

- 125° Rotating slats
- Very robust and durable
- Freestanding, wall-mounted and linkable
- Waterproof by rubbers and excellent drainage
- Expandable with a sun and wind sensor
- Expandable with vertical sun protection system (SolidScreen)
